The Orthopaedic Center is dedicated to improving patients quality of life through orthopaedic excellence and compassionate care.

Our physicians participate in cutting-edge research programs and use the latest technology in orthopaedic surgery. Orthopaedics focuses on disorders of the musculoskeletal system; the science of bones, joints, ligaments, tendons and muscles to allow you to work, move and be active. Our philosophy is to correct these disorders by utilizing the latest non-invasive options such as electro-stimulation, nutrition, new medications and physical therapy.

Using customized clinical protocols and the latest technology, we strive to provide the right treatment at the right time for each patient. Our goal is to empower the patient with the services and education that will assist them in returning to their highest level of function.

Our patients become part of our family; and like family, they know we'll be here for them. We see our role in patient care as orthopaedic specialists working together to offer the best possible medical and surgical care available.
